
clustering_w_local

This function calculates Barrat et al. (2004) generalised local clustering coefficient. For a detailed description and alternative ways of defining triplet values, see this blog post.

```
Example# Load tnet  
library(tnet)
```

```
# Generate a random graph  
rg <- rg_w(nodes=100,arcs=300,max.weight=10,directed=FALSE)
```

```
# Run function  
clustering_w_local(rg)
```
