

Version 2.4 (0.1.4) of tnet is now complete!

Last Updated Thursday, 25 February 2010

Version 0.1.4 includes improved versions of the following functions:

- `small_world_w / _tm`: improved output
- `rg_w / _tm`: if `ties` is set between 0 and 1 instead of a integer above 1, the functions produce tie independent networks (i.e., the 'ties' value will be the probability that a tie has of occurring).
- `as.tnet`: this function now checks that node ids are above 1

It also includes the Online Social Network (see the Datasets-page on my blog), and self-loops have been removed from the other datasets.
